ORACLE

5 Questions: How Is Oracle Supporting the US Borders Initiative?

The Department of Homeland Security (DHS) relies on Oracle solutions to analyze and secure data where it lives—at US borders. With cloud native AI, these solutions are helping the agency improve border operations, lawful trade, and secure migration.

How is Oracle supporting the US borders initiative?

Oracle is helping DHS improve border, trade, and migration systems through secure, cloud native capabilities that provide real-time data insights for faster, more effective mission outcomes.

How does Oracle help DHS and its partner agencies achieve their missions?

Oracle solutions allow them to analyze, connect, and act on data across systems. AI-driven insights for better decision-making and cross-agency collaboration help strengthen national security, travel, trade, and public safety.

What makes Oracle different in this mission space?

With decades of experience supporting federal agencies, Oracle leverages cloud infrastructure designed for national security. Oracle solutions secure and analyze data where it lives, eliminating risk from data movement while improving performance.

How does Oracle help DHS and its partner agencies improve performance?

Oracle solutions deliver analytics and AI within controlled environments, removing the need for costly data transfers and providing DHS and its partner agencies with immediate, secure insights while addressing compliance and operational integrity.

What outcomes does Oracle help DHS and its partner agencies achieve?

Oracle helps DHS and its partner agencies accelerate decision-making, boost mission resilience, and provide secure data sharing. That helps improve agency readiness and coordination while strengthening national security.

Learn how Oracle's analytics platform supports DHS

Oracle offers a complete platform for every DHS analytics role to support the agency's mission. AI is embedded throughout the platform to accelerate productivity and improve decision-making.
